

Environmental Clearance

On striping projects: 1) if you plan to obliterate striping prior to restriping, that you must test the existing striping paint for lead and inform us that this is part of the scope of work; and 2) all construction vehicles and equipment must remain on pavement. For all of the sign projects, the sign panels should be replacement in like kind and all projects should involve no ground disturbance such as replacement of poles or installation of connecting conduit.

Here is the link to the Clearance Memos that contain a Word document template for a Group 1 Categorical Exclusion:

http://adotenvironmental.com/highways/EPG/EPG_common/Docs/NEPA/cleared_clearance_memos.doc

An example of an exhibit to a Group 1 CE for a project involving multiple segments of roadway striping is attached and is both location map and identifier table with numerical code which identifies each segment.

Please let me know if you have any questions.
